Knowledge Management

BIBLIOGRAPHY

"The man who does not read good books has no advantage over the man who can't read them."
- Mark Twain

This bibliography is provided as a reference for any outside materials that were used in the development of the Tryon and Associates Knowledge Management products and seminar materials. This is a partial bibliography in that I provide only the authors name, title of the work and the original date of publication. A short description of the significance of the materials is included with most of the titles. You will also find a private rating system indicating my opinion of the title. "AAA" indicates a must-read and a book that I feel belongs in every professional's library. "AA" tells you this is an important work that should be in a corporate library for frequent reference. "A" identifies a title to browse when there is time. I do not list titles below an "A" but will be happy to provide bibliographical information on any other material referenced in my seminars. You may find some of these books in your local bookstore but most of them are easier to find on the Internet.

Chuck Tryon

Block, Peter. STEWARDSHIP: Choosing Service Over Self- Interest. 1993. (AA - Must read for every manager who really wants to positively impact their organization. This is the first book where I marked up the forward! If nothing else, read that part of the book.)

Burrill, Claude W. and Leon W. Ellsworth. MODERN PROJECT MANAGEMENT: Foundations for Quality and Productivity. 1980. (AA - This is a classic, complete text on Project Management ... a personal favorite. Here is where I first encountered the contrast between single-time and continuing efforts. This book is very hard to find.)

Brooks, Frederick P. THE MYTHICAL MAN-MONTH. 1979. (AA - Brooks was my introduction to a new view of projects and Project Management. Many of Brooks' observations conflicted with traditional knowledge, such as "Adding manpower to a late software project makes it later." A 25th anniversary version of this book was issued by Addison Wesley in 1995.)

Byham, William C. ZAPP! The Lightning of Empowerment. 1988. (AAA - Looking for a fun listen? This is it. Super material on an often misused notion ... empowerment.)

-, and Jeff Cox. HEROZ: Empower Yourself, Your Coworkers, Your Company. 1993. (AAA - Yes I know this is not in alphabetical order, but this is a part two to the above book. If you like ZAPP!, don't stop. This book deals with the "I'm waiting for my management" cop-out.)
Cleland, David I. **PROJECT MANAGEMENT**: Strategic Design and Implementation. 1994. (A - College text with good content.)

Champy, James. **REENGINEERING MANAGEMENT**: The Mandate for New Leadership. 1995. (A - Look, Drucker recommends this as "THE definitive book" on the influence of the Information Age on traditional management structures. Read it and you'll never again want to join the ranks of middle management. If you are a middle manager, you will be looking for a way out. May I suggest ... Project Management?)

Covey, Stephen R. **PRINCIPLE-CENTERED LEADERSHIP**. 1991. (AAA - In my opinion, this is Covey's best work. He describes a great model for real empowerment in an organization.)

Crosby, Philip B. **QUALITY IS FREE**. 1979. (A - This material is considered the most quoted of least read books. GUILTY AS CHARGED! Crosby is best known for his definition of "quality." He argues that quality does not cost more, hence the title. In fact, the lack of quality adds cost due to waste and rework.)

Daft, Richard L. **ORGANIZATION THEORY & DESIGN**. 1995. (A - College text that deals with modern organizational theory. Recognizes the changes required for Information Age companies.)

Davenport, Thomas H. and Laurence Prusak. **WORKING KNOWLEDGE: How Organizations Manage What They Know**. 2000. (AAA – This is one of the books that I used during my research on organizational knowledge. While the authors never seem to define what they mean by “organizational” knowledge, they give many good examples and provide much to think about. I have used this book as a reference in much of my work.)

Davidson, Mike. **THE TRANSFORMATION OF MANAGEMENT**. 1996. (A – This book is one of the inspirations for our work on defining scope. Davidson introduces a “strategic framework” where an organization defines its mission and then goals, objectives and strategies from there. I’ve used this book as reading material to prepare organizations for facilitated scoping sessions.)

DeMarco, Tom. **CONTROLLING SOFTWARE PROJECTS**: Management, Measurement, and Estimation. 1982. (A - Good material if you are managing software development projects.)

-. **DEADLINE**: A Novel About Project Management. 1997. (A – This one is just for fun. As you read these short reviews, you’ll learn why I think so highly of Tom DeMarco. This book borrows the structure of Eli Goldratt’s The Goal and Critical Chain in that it is written as a novel. I’ll pass on the obvious pun of what a “novel” approach this is. If you are already familiar with DeMarco, this is a pleasurable tale. If you are new to this author, I’d recommend Peopleware...
Knowledge Management Bibliography 1.1

Provided by Tryon and Associates
command and control structures into a more modern, empowered organization.)

Hammer, Michael and Steven A. Stanton. *THE REENGINEERING REVOLUTION*. 1995. (AA - Hammer uses this material to address the misunderstanding many people took away from his earlier book and also address many of the shortcomings he has observed in reengineering projects. Much of what he discusses has to do with defining roles and responsibilities with heavy emphasis on a high-level reengineering leader. Those familiar with my views on the Project Owner will find many similarities.)

Hawamdeh, Suliman. *KNOWLEDGE MANAGEMENT: Cultivating knowledge professionals*. 2003. (AA - Dr. Hawamdeh is a professor at the University of Oklahoma and is the primary motivation for the Master of Science in Knowledge Management degree program. He is also the founding chair for the International Conference on Knowledge Management and the Knowledge and Project Management Symposium. Dr. Hawamdeh and I have collaborated on numerous KM related papers including the KPM Symposium. This book provides you with a general background on the implication of the knowledge age. When searching for this title and any other publications from Dr. Hawamdeh, you may also find his name listed as “Al-Hawamdeh.”)

- and Thomas L. Hart. *INFORMATION AND KNOWLEDGE SOCIETY*. 2002. (AA –Consider this book if you are seeking a general primer on KM.)

Holt, David H. *MANAGEMENT: Principles and Practices*. 1987. (A - This is a great college text on management.)

Kersten, E.L. *THE ART OF DEMOTIVATION*. 2005. (AAA – You are probably very familiar with the inspirational photo posters that adorn many conference rooms. They usually tout such motivational messages on teamwork, goals and the like. Now for some reality. Dr. Kersten, yes he actually holds a Ph.D., launched a counter website some years back at Despair.com. On this site, he sells equally inspiring posters with far more realistic inscriptions. For instance, one poster states that “If a pretty poster and a cute saying are all it takes to motivate you, you probably have a very easy job. The kind robots will be doing soon!” Dr. Kersten recently entered the book market with this biting and often accurate view of corporate cultures. Next time you visit his website, don’t miss the video clips!)

Edvinsson, Leif and Michael S. Malone. *INTELLECTUAL CAPITAL: Realizing Your Company’s True Value by Finding its Hidden Brainpower*. 1997. (A – Useful to understanding the value of the knowledge retained by your people.)

Lewis, James P. *FUNDAMENTALS OF PROJECT MANAGEMENT*. 1997 (AAA - This
Provided by Tryon and Associates

book is a very concise and direct recap of the most significant techniques required by Project Managers. I suggest this book as the text for my Project Management Fundamentals class. And yes, I titled my course long before I ran across Lewis’ book. One of those "great minds" things. Lewis’ book has been so popular that is now in a 2001 second edition. I’ve personally bought and distributed a couple of hundred of these books.)

Lutz, Robert A. **GUTS: The Seven Laws of Business That Made Chrysler the World’s Hottest Car Company.** 1998. (AA - I really liked this book. Especially the law “The customer ISN’T always right!” If you want the short version, try the excerpt posted as a link on our website.)

Lynn, Gary S. and Richard R. Reilly. **BLOCKBUSTERS: The Five Keys to Developing GREAT New Products.** 2002. (AA – After ten years of research looking at 700 products, these two authors believe they have synthesized the keys to creating great, new products. While the terminology is sometimes different, I find their observations very consistent with what we teach in the Project Management series.)

Maxwell, John C. **THE 21 IRREFUTABLE LAWS OF LEADERSHIP: Follow Then and People Will Follow You.** 1991. (AA – If you are looking for a book that will help you develop as a leader, this is a great choice. Maxwell defines leadership as influence. Leadership is not commanding people nor is a result of position. Leadership skills are developed over time following a set of principles. Maxwell is recognized across many industries as a top expert in this field. After reading his book, I agree.)

Naisbitt, John. **MEGATRENDS: Ten New Directions Transforming Our Lives.** 1982. (AAA - Go get it off the shelf, wipe off the dust, and read Chapter 1 again with fresh eyes. Here is a very good discussion on the transition from the Industrial Society to the Information Society.)

O’Dell, Carla and C. Jackson Grayson, Jr. **IF ONLY WE KNEW WHAT WE KNOW: The Transfer of Internal Knowledge and Best Practice.** 1998. (AAA – This is another primary reference that I used in my research. The authors were some of the first to recognize the distinction of organizational knowledge. I especially like the way they refer to knowledge as “information in action.” They spend much of the book talking about the value proposition for KM. This is a worthwhile read.)

Page-Jones, Meiler. **THE PRACTICAL GUIDE TO PROJECT MANAGEMENT.** 1985. (A - A good writer with good ideas. Very software project biased.)

Peters, Thomas J. **LIBERATION MANAGEMENT: Necessary Disorganization For The Nanosecond Nineties.** 1992. (AAA, AAA - Get the hint? Stop looking at this list, go to your bookstore and don’t leave until you have this material in your hand. This is THE BEST BOOK about project management that has been written in my lifetime. Peters spends a lot of time on the significance of projects to the corporate organization. This man is so right it is scary ... and a lot of people don’t want to hear this message. I have listened to the audio version at least a half dozen times. And no, I’m not a slow learner!)

Phillips, Donald T. **LINCOLN ON LEADERSHIP: Executive Strategies for Tough Times.** (A -
I learned new things about this great president... and about myself. A very good leadership book.)

Project Management Institute. *A GUIDE TO THE PROJECT MANAGEMENT BODY OF KNOWLEDGE*. (AAA - This material is prepared by the PMI Standards Committee and holds a tremendous amount of good information for any practicing Project Manager. It is also the basis for the Project Management Professional certification offered by PMI. The PMBOK, as it is known in the industry, is constantly under revision with new information and ideas by PMI. Check their website at [www.PMI.org](http://www.PMI.org) for the most current version. It is available on CD to PMI members.)

Roberts, Wess. *LEADERSHIP SECRETS OF ATTLA THE HUN*. 1987. (AA - Great book on leadership, not management! It will make you afraid to look in the mirror. You may not like what you see. Don't miss the "Author's Note" at the front of the book.)

- *VICTORY SECRETS OF ATTLA THE HUN*. 1993. (AA - If you liked "Leadership Secrets...," you'll like this one too.)

- *MAKE IT SO*. 1995. (A - This one is for all you Trekkies, leadership principles through the capable eyes of Captain Jean-Luc Picard. It is also good reading in the tradition of Attila. You can even take it to work ... without feeling guilty. ENGAGE!)

Smith, Adam. *THE WEALTH OF NATIONS*. 1776. (A - This is the book that started the Industrial Revolution. We were all supposed to read it in college, but it was too boring. Well, it is still boring, but you ought to struggle through the first chapter or two. It will give you a balance to the changes brought on by the dawn of the Information Age.)

Srikantaiah, T. Kanti, Micheal E.D. Koenig and Suliman Hawandah. *CONVERGENCE OF PROJECT MANAGEMENT AND KNOWLEDGE MANAGEMENT*. 2010. (AAA – This is the first book that I know that specifically addresses the synergies between projects, Project Management and the emerging discipline of Knowledge Management. This is a “chapter book,” something that is common done in academic circles, Books of this type incorporate the work of many authors. My contribution is Chapter 6 where I describe the project orientation of my strategies and then share the results of my research on improving the productivity of knowledge workers on projects. This was actually two separate papers but the editors wanted to merge them into a single chapter. The book contains a wide range of interesting articles on how project activities may influence KM. You may recognize two of the editors. Dr. Hawamdeh created the Master’s in KM program at OU and is currently doing the same at North Texas University in Denton. He was the founding chair of the Knowledge and Information Professional Association (KIPA), the hosting organization for the annual KPM Symposium. Professor Kanti has been a participant and speaker for several of the KPM Symposiums that are held in Tulsa each summer. This book was published by Scarecrow Press and is easily available from like Amazon.

Toffler, Alvin and Heidi Toffler. *CREATING A NEW CIVILIZATION: The Politics of the Third Wave*. 1995. (AAA - Here it is! If you have been around me for ten minutes, you have heard about this book. If you have listened to anything in the Project Management seminars, you
have heard about this book. Actually, this is not one book, but many. The Tofflers have
condensed the heart of four different books into 106 pages. This is NOT a fast read. And
unfortunately, this book is now out of print and becoming very hard to find. Happy hunting!

-. FUTURE SHOCK. 1970; THE THIRD WAVE. 1980; POWER SHIFT. 1990. (A - These
books comprise Toffler's 30 year trilogy. The most impressive thing about "Future Shock" book
is when it was written ... while most of us were sleeping! These books gave the post-industrial
era substance and a name.)

Wurman, Richard Saul. INFORMATION ANXIETY. 1989. (A – Mr. Wurman is best known
for creating a number of highly respected travel guides. He used his skills to help create a map
through, as he calls it, “the information jungle.” If it is true that many of today’s medical issues
are stress related, we cannot rule out the implications of information over-load.)
